PRESS RELEASE

Veripress 6.0 announced.

SYDNEY, Australia - June 12, 2015 - Serendipity Software today announced version 6.0 of Veripress, a major update to the software that includes many new features and enhancements to benefit new and existing customers alike.

"Veripress version 6.0 merges spot colours directly in RGB. This significantly expands the gamut available to spot colours, increasing the accuracy of their on-screen representation" said Peter Skarpetis, Serendipity Software's Chief Executive Officer.

Veripress version 6.0 has increased processing performance when imaging and rendering files, improved utilisation of hyper-threaded CPUs, and reduced memory and resource requirements to process jobs.

Veripress version 6.0 introduces real-time zooming to the SoftProof application. Imaged and rendered previews are generated with a pre-calculated pyramid of images, at power of 2 intervals, resulting in faster, more responsive zooming when proofing on-screen.

Veripress version 6.0 features operating system integration, improving workflow efficiency by allowing users to submit or preview jobs directly from the OS file manager.

Veripress version 6.0 further enhances and simplifies system security by allowing users to belong to multiple groups. This gives the system administrator fine-grained control over feature, application, job and database access for each user.

Veripress version 6.0 adds complete Client and Server backup and restore functions, providing quick recovery from failures, making it easy to move the software to new hardware, or to standardise the Client layout for multiple users.

Veripress version 6.0 now reads the orientation data in photo files, taking the guess work out of printing smartphone and tablet photos by always rendering them the right way up.

Veripress version 6.0 includes additional compression modes, further reducing the file sizes of imaging files.

Veripress version 6.0 supports proof view templates in the IFRA Track Bookfilter driver. This allows broadsheet spreads defined in the planning files to be imposed on-the-fly and displayed automatically in SoftProof.

Veripress version 6.0 adds Jobtickets, streamlining workflows for customers with many different output

devices. Jobtickets can be shared between different devices and changed on-the-fly, increasing the flexibility and adaptability of the Veripress workflow.

For more information on the new features and enhancements in Serendipity Veripress 6.0 see the release notes available on the Serendipity Software website.
