PRESS RELEASE

Serendipity Megarip 7.1 announced.

SYDNEY, Australia – September 22, 2017 - Serendipity Software today announced version 7.1 of Megarip, a major update to the software that includes many new features and enhancements that will benefit new and existing customers alike.

"Megarip version 7.1 adds support for high DPI displays" said Peter Skarpetis, Serendipity Software's Chief Executive Officer. All the icons and applications have been redesigned to take advantage of the extra pixels. The SoftProof application has been rewritten to use all available pixels and as a result onscreen proofs look crisp and detailed while retaining their accurate colour reproduction.

Megarip version 7.1 includes support for ΔCh in the Calcheck application, facilitating compliance with ISO 12647-7:2016 and other current colour standards.

Megarip version 7.1 networking has been rewritten from the ground up and now includes support for the TCP/IP v6 standard.

Megarip version 7.1 includes native installer packages for Centos, Fedora, Debian and Ubuntu Linux, simplifying installation. Desktop integration has also been improved making it easier for the application to interact with Gnome and KDE desktop environments.

Megarip version 7.1 includes digitally signed installer packages for Windows which makes deployment of the application much more secure on Windows 8.1 or later.

Megarip version 7.1 includes an updated Workbench user interface for the Pagesetup Pool, Press, and Camera datatypes further simplifying the user interface.

Megarip version 7.1 includes optimisations which speed up job processing, client - server communications and job submission.

Megarip version 7.1 has better support for duplexing printers. Automatic hardware margins and faster duplexing allow Megarip to integrate with enterprise environments and high volume office printers.

Megarip version 7.1 includes an enhanced Studio application which can auto-place multi-page documents.

For more information on the new features and enhancements in Serendipity Megarip 7.1 see the release notes available on the Serendipity Software website.
